AGRICULTURE AND HORTICULTURE

"Agriculture and horticulture play a vital role in India's economy and food security by ensuring nutritional well-being, generating substantial rural employment, and increasing farmer incomes through crop diversification and value addition. Horticulture, in particular, makes a significant contribution to the agricultural sector's Gross Value Added (GVA) and boasts higher productivity than food grains. India is a global leader in the production of fruits, vegetables, and spices. This sector also supplies essential raw materials for the food processing industry, supports rural development, and plays a key role in earning foreign exchange through exports. **"This exhibition provides a valuable platform for the Agriculture and Horticulture Departments to showcase various achievements and schemes to progressive farmers, the general public, villagers and students from schools and colleges."**

Exhibition with Focus on:-

- Agriculture Sector
- Dairy Industries

- Organic Buyers
- Farmers Agriculturist
- Progressive Consumers etc.

FISHERIES :-

"Fisheries play a crucial role in India's economy and societal well-being by ensuring food security, generating employment for millions, and significantly contributing to export earnings and national income. As the world's third-largest fish producer and the second-largest in aquaculture, India effectively utilizes its extensive inland and marine resources to support its growing population and economic development. The fisheries sector also contributes meaningfully to the achievement of the Sustainable Development Goals (SDGs) by providing affordable nutrient-rich food and enhancing livelihoods, particularly in rural and coastal communities."

DAIRY FARMING :-

"Dairy farming is a vital component of India's economy, providing a stable source of income to millions of small and marginal farmers while ensuring nutritional security through milk and dairy products. It generates widespread employment across the entire value chain—from production and processing to distribution and retail. As the world's largest milk producer, India's dairy sector makes a significant contribution to the national economy and serves as a key driver of rural development, women's empowerment, and food security. With increasing demand and scope for innovation, the sector holds strong potential for future growth."

Organic Farming :-

"Organic farming holds significant importance in India as it promotes both human and environmental health. By enhancing soil fertility, reducing input costs, and encouraging sustainable, climate-resilient practices, organic farming supports long-term agricultural sustainability. It produces nutritious, chemical-free food, conserves natural resources, protects biodiversity, and opens economic opportunities through premium pricing and export markets. Recognizing these benefits, the Indian government actively supports organic farming through initiatives like the Paramparagat Krishi Vikas Yojana (PKVY), which assists farmers in adopting eco-friendly and traditional agricultural methods."
